200 FORM 600

National Aeronautics and Space Administration awarded a contract to Stanford Research Institute to perform research entitled, Study of the Structure and Dynamics of the Research and Development Industry. The contract was awarded on 30 June 1964 and was to extend for a period of 10 months. The method of approach that was proposed for Stanford Research Institute consisted of three basic steps: 1) Analysis of the Workforce Used in NASA R&D in the Los Angeles complex. 2) Analysis of the Regional Distribution of Materiel Procurement for NASA R&D in the Los Angeles complex. 3) Analysis of Interactions among NASA-Serving Companies and the Local Environment. This report describes the major research efforts that have been performed during the first three months of the contract.

During the period covered in this report the managements of Northrop
